

# Internal Release Agent

HIPE®ADD SP318C for a perfect glue distribution in wood fibers and improved wet ability of fibers and chips.

It produces an excellent release of the board from pressplates or metal belts prohibiting sticking of the glued wood particles on metal parts.

Preventing resin build-up on press plates and belts, it minimizes cleaning operations. HIPE®ADD SP318C confers smooth and blister free surfaces and reduces glue consumption avoiding glue spot formation due to better glue distribution.
