

Wetting Agent

Wetting agents improve speed and homogeneity of resin penetration in the paper network.

Our selection of special raw materials allows to obtain extremely low foam additives without addition of antifoam agent in the bath recipe, avoiding any risk of surface defect.

The whole range is without wax and silicone and is nonylphenol free.

NAME	DOSAGE	BENEFIT
HIPE®ADD W1	0,1% - 0,5%	<ul style="list-style-type: none">■ Increases impregnation speed and enables homogenous resin penetration into difficult papers (dark and unicolor)■ Supports homogenous corundum distribution in the impregnation resin■ Improves transparency of final laminate■ Excellent wetting of the resin towards inorganic particles■ Extremely low foam formation
HIPE®ADD NU04	0,1% - 0,5%	
		<ul style="list-style-type: none">■ Universal wetting agent for UF, MF and Phenolic resins
